

Correction to Addition of α A-Crystallin Sequence 164–173 to a Mini-Chaperone DFVIFLDVKHFSPEDLT Alters the Conformation but Not the Chaperone-like Activity

Murugesan Raju, Puttur Santhoshkumar, Leike Xie, and K. Krishna Sharma*

Biochemistry 2014, 53 (16), 2615–2623. DOI: 10.1021/bi4017268

Figure 5. Aggregations of denaturing proteins in the presence of mini- α A-chaperone or chimeric mini-chaperone (CP1). (A) Heat- and EDTA-induced ADH (5 μ M) aggregation in the presence of mini- α A (40 μ M) or mini- α A (Δ 87–88, 40 μ M) at 37 $^{\circ}$ C. (B) Heat-induced citrate synthase (4 μ M) aggregation assay at 43 $^{\circ}$ C in the presence of mini- α A (40 μ M) or CP1 (40 μ M). (C) ADH (5 μ M) aggregation in the presence of mini- α A (40 μ M) or CP1 (40 μ M). (D) Chaperone-like activity of mini- α A or CP1 peptide toward DDT-induced aggregation of LA at 37 $^{\circ}$ C.
